2026

ISLANDS OF *Tomorrow*

SPEAKERS

Chan Beng Kiat *Sentosa Island - Future of Tourism*

The Greater Sentosa Master Plan charts a new chapter for Singapore's island playground — integrating new connectivity, rejuvenated beaches, coastal protection, and landmark destinations within a landscape-first framework. Discover how Sentosa and Pulau Brani are being reshaped into a resilient, world-class leisure destination through to 2045.

Lee Wai Kin *Long Island - Future of Growth*

Off Singapore's East Coast, a long-term reclamation project is taking shape to meet multiple national needs at once — strengthening coastal protection against rising seas, securing water resilience through a new reservoir, and creating new land and waterfront parks for future generations. Explore how Long Island reflects Singapore's integrated approach to planning for an uncertain climate future.

Tang Hsiao Ling *Jurong Island - Future of Energy and Green Transition*

Marking 25 years as Singapore's energy and chemicals heartland, Jurong Island is now charting its next transformation — dedicating land to renewable energy, low-carbon technologies, and a major green data centre park. Discover how the island is balancing economic competitiveness with the nation's path to net-zero by 2050.

Peter Ortner *AI and Planning - Future of Planning Education & Profession*

As artificial intelligence reshapes urban planning, design, and construction, Singapore is investing in a new generation of "AI-bilingual" professionals through the Built Environment AI Centre of Excellence. Explore what this means for the future of planning education and practice — and what stays irreducibly human in the work of shaping cities.
